

IN THE SPECIFICATION:

On page 5, in the paragraph beginning on line 8, please amend as follows.

The expression that "displacement of the detective member can be recognized" has substantially the same meaning as the expression that "a force applied to the detective member from outside can be recognized". In the case where the first and second switching electrodes incorporated in the sensor of the present invention are used as the switch function, they may be used as a mere switch to switch between the on-state and the off-state, fully independently of change of resistance value between the first electrode and the second electrode, as well as a wakeup switch to detect the operation applied to the detective member, for changing the resistance value between the first electrode and the second electrode, ~~as set forth in claim 7.~~
